// Clear the Text Box
NewHelpDeskTicketDetail = "";
await Task.Delay(250);
}
}
(awaitable) Task Task.Delay(int millisecondsDelay) (+ 3 overloads)
Creates a task that completes after a specified number of milliseconds.
Returns:
A task that represents the time delay.
Exceptions:
ArgumentOutOfRangeException
CS4033: The 'await' operator can only be used within an async method. Consider marking this method with the 'async' modifier and changing its return type to 'Task'.
